FISH COMMISSION OF OREGON
TRAWL INVESTIGATION

Cruise Report 67-2, Phase A-Shrimp

Vessel: MV Sunrise

Dates: February 20-May 4, 1967.

Objectives: 1. Determine distribution and abundance of pink shrimp (Pandalus jordani) off Oregon.
2. Determine size, sex ratio, and age composition of shrimp caught.
3. Determine shrimp gravidity.
4. Identify, count, weigh, and collect incidentally caught fish and invertebrates as requested.
5. Collect length data for Dover sole and age-length data for juvenile Dover, English, and petrale sole as time permits.

Methods: The vessel made 173 tows with a 41-foot headrope Gulf semi-balloon trawl. The trawl was made of 1-1/8-inch stretch mesh netting in the body and intermediate, 1-1/2-inch mesh in the codend, and a 1-1/8-inch innerliner in the anterior one-third of the codend. A 1/2-inch knotless innerliner was in the posterior two-thirds of the codend. Plastic rollers and a 1/4-inch galvanized chain, hung loop-style, were attached to the 52-foot footrope. A 5/16-inch proof steel tickler chain completed the trawl net, which was attached to the otter boards by 30 feet of bridle.

The catch was sorted after each tow. Fish were either counted or weighed, or both, by species as time permitted. Dover sole were measured to the nearest lower cm, and Dover sole shorter than 160 mm were preserved. A one-half to one pound random shrimp sample was drawn, measured, and sexed. Sample weight and spawning condition of female shrimp were noted. We preserved requested or unique fish and invertebrate species as time permitted.

Results: Of the 173 total tows, 26, 35, 19, 38, and 55 tows were made in areas 1 through 5, respectively. Area 1 tows were between the California-Oregon border and Cape Blanco in 46 to 138 fathoms. Area 2 tows were between Cape Blanco and the Umpqua River in 50 to 132 fathoms. Area 3 tows were between the Umpqua River and lower Heceta Bank (44°02' N. Latitude) in 54 to 126 fathoms. Area 4 tows covered the area between Stonewall Bank (44°20' N. Latitude) and Cape Kiwanda in 50 to 125 fathoms. Area 5 tows were between Cape Kiwanda and the Astoria Canyon in 49 to 123 fathoms. Figure 1 shows location of areas surveyed and tows. No tows were made on Heceta Bank because of rough bottom. In general, we found shrimp in abundance in all areas surveyed. A very large 1966 year class was present in all areas, but

especially from Newport south. Attached tables give location of tows, depth, catch of shrimp, average shrimp size per tow, and other data. Tows 35 to 61 were in area 1; tows 1-34 and 62 in area 2; tows 63 to 80 in area 3; tows 81 to 118 in area 4; and tows 119 to 173 in area 5. Results by area are summarized below.

Area 1. We caught shrimp at an average rate of 292 pounds per hour tow with a range of 0 to 5,520 lbs/hr. Three tows produced catches greater than 400 lbs/hr; two tows were between 100 and 400 lbs/hr. The age composition was:

<u>Year class</u>	<u>By number</u>
1966	36%
1965	9%
1964	5%

Only a trace of 1963 year-class shrimp was captured. Shrimp size ranged from 60 to 217 shrimp per pound with a mean size of 186 shrimp per pound. The catch was composed of 76% male, 19% transitional, and 5% female shrimp. Twenty-nine per cent of the females were gravid during the period March 27-April 4, 1967. Age composition between the Rogue River and the California-Oregon border differed from that between the Rogue River and Cape Blanco. South of the Rogue River, catches averaged 91%, 8%, 1%, and 0%, respectively, for the 1966, 1965, 1964, and 1963 year classes. North of the Rogue River, catches were 30%, 26%, 43%, and 2%, respectively. Average sizes were 203 and 102 shrimp per pound south and north of the Rogue River, respectively. Most shrimp were concentrated off Brookings.

Area 2. Shrimp were caught at a rate of 619 pounds per hour tow with a range of 0 to 8,400 lbs/hr. Twelve of 35 tows yielded catches between 100 and 400 lbs/hr; eight tows produced catches exceeding 400 lbs/hr. The age composition was:

<u>Year class</u>	<u>By number</u>
1966	78%
1965	17%
1964	5%
1963	Trace

Shrimp size ranged from 90 to 293 shrimp per pound with an average of 223. The catch sex ratio was 92% male, 3% transitional, and 5% females. During the period February 20, to March 26, 1967, 74% of females were gravid. By March 26, however, only about 4% were gravid.

Area 3. We caught shrimp at an average 180 pounds per hour tow catch rate, which ranged from 0 to 1,609 lbs/hr. Catch rates exceeding 100 lbs/hr. were made on three tows. The age composition was:

<u>Year class</u>	<u>By number</u>	<u>By Weight</u>
1966	90%	Trace
1965	7%	18
1964	3%	81
1963	Trace	Trace

Shrimp size ranged from 176 to 310 shrimp per pound with an average of 265. Sex composition was 83% males, 13% transitionals, and 4% females. Shrimp gravidity was 14% during April 6-8, 1967.

Area 4. We caught shrimp at an average 285 pounds per hour tow, ranging from 0 to 2,250 pounds per hour. Catch rates between 100 and 400 lbs/hr. tow were achieved on six tows; seven tows exceeded 400 lbs/hr. The age composition was:

<u>Year class</u>	<u>By number</u>
1966	50%
1965	14%
1964	36%
1963	Trace

Shrimp size ranged from 85 to 193 shrimp per pound with an average of 134. Sex composition was 48% males, 22% transitionals, and 30% females. During the period April 18-23, 1967, no females were gravid. Shrimp were found in abundance from Depoe Bay to Cape Kiwanda; none was found off Stonewall Bank.

Area 5. We caught shrimp at the rate of 569 pounds per hour tow, ranging from 0 to 3,750 pounds per hour tow. Twenty-one tows were greater than 400 lbs/hr. An additional 11 tows were between 100 and 400 lbs/hr. The age composition was:

<u>Year class</u>	<u>By number</u>
1966	60%
1965	19%
1964	20%
1963	1%

Shrimp size ranged from 90 to 213 shrimp per pound and averaged 155. During the period April 24 to May 4, 1967, no females were gravid. Shrimp were abundant throughout the area.

Miscellaneous. Fish were common in many of the tows. Rex sole, slender sole, smelt, hake, dogfish shark, and arrowtooth flounder were most common. Many small rockfish (Scorpaenidae) were also caught. Juvenile hake were captured in several tows in Area 4. Lampreys, agonids, and ratfish were collected for Oregon State University. A number of bottom-type samples and salinity samples were collected. Length and sex were recorded from Dover sole (see cruise report 67-2, phase B-fish).

Personnel: Jack Robinson, Party Chief, 2/20-3/19, 3/29-5/2/67
Robert Demory, Party Chief, 3/20-3/28, 5/3-4/67
Rudy Lovvold, Vessel Captain
Gary Milburn, Aquatic Biologist, 2/20-5/4/67
