FOREWORD

The statistics presented in this publication provide information on the amount and value of commercial food fish landings in the State of Oregon in 2000. This information is frequently requested by various government, industry, or private user groups for resource management, marketing, land use planning, or other needs. We have not attempted to explain management objectives, harvest methods, or trends in the commercial fisheries.

The joint efforts of many persons were required to record, process, and review this material. The origin and flow of landing data starts with the commercial fishing industry: specifically the recording of landing information by wholesale fish and bait dealers. Many Oregon Department of Fish and Wildlife personnel assisted in the processing of the recorded data. Data processing specialists prepared landing records for data entry and monitored the timeliness and accuracy of the records, computer programmers developed and maintained the processing programs, data entry personnel entered the record information on the computer data base, and Department management and port biologists helped review the accuracy of the reported information.

Through the years the knowledge, expertise, and highly conscientious efforts of the Department staff have played a large part in insuring that the Oregon commercial fisheries data base is one of the most accurate and timely data bases (with respect to preliminary information) on the Pacific coast. The efforts of all are greatly appreciated.

EXPLANATION OF TABLES

Source of Data

Oregon law requires commercial fishermen to sell their catch to a licensed wholesale fish or bait dealer. At time of sale, the dealer must record certain information on a Fish Receiving Ticket form supplied by the Department. This information includes date of landing, port of landing, gear used to take the fish or shellfish, pounds landed by species and price per pound paid to the fisher. The fish tickets are returned to the Department and edited by staff specialists and management biologists for accuracy and completeness prior to final tabulation.

Landings

Commercial landings are reported for the Columbia River (Oregon landings only), ports along the coast (Fig. 1), and by county for freshwater species (Table 63). Landings at the coastal ports include ocean and bay/estuary-caught fish or shellfish. For ocean-caught species, port of landing does not necessarily indicate general area of catch. Boats can fish coast wide and return to their home port (or any other port) to land their catch.

Landings by month reflect the date of purchase by the dealers. This may not necessarily be the date the fish were caught, as many vessels have the capability of holding fish for extended periods of time before returning to port.

All fish and shellfish landings, unless otherwise indicated, are reported as round (whole) weight. Certain species may be dressed or filleted prior to landing and the following percentages were used to convert these landings to pounds round weight:

Halibut, dressed, head-on	+	15%
" dressed, head-off	+	35%
Salmon, troll dressed, head-on	+	15%
Sablefish, dressed, head-off	+	60%
Scallop, shucked	+	1,220%
Pacific Whiting, filleted	+	235%
" " headed and gutted	+	156%
" " surimi	+	625%

The common and scientific names of species reported in the commercial catch are shown in Table 1. Fish dealers are required to record each species landed; however, this is not always possible due to the difficulty identifying certain species. Some species are combined and reported under a market category, i.e. "Rockfish, other sp." includes several different species of rockfish that are combined and reported only as "rockfish" by the dealers.

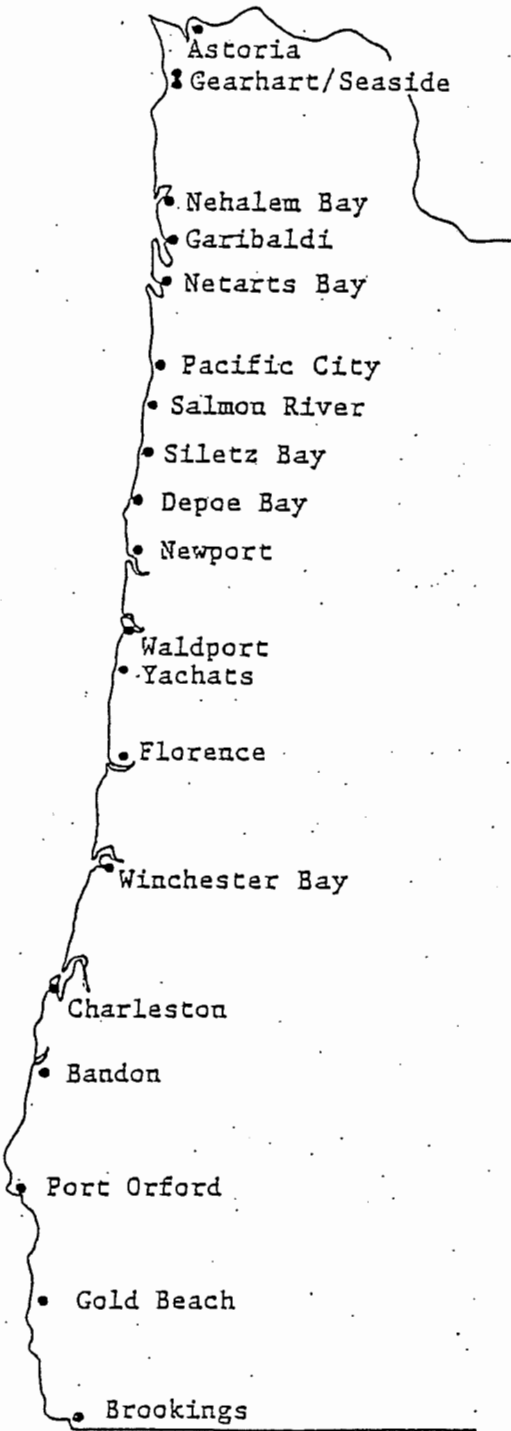

Figure 1. Oregon coastal ports

The Pacific Fisheries Management Council established new categories for reporting rockfish species beginning in 2000. As a result, two groups were eliminated from the tables (other rockfish and nominal P.O.P.) and three categories were established that grouped rockfish by complex as determined by zone of catch. Each complex also includes species that are landed and reported separately.

The three new categories are:

- Nearshore rockfish complex – Includes species predominantly found in the immediate nearshore areas along the coast. Two species, the **black** and **blue** rockfish are reported in the tables separately. The other species caught in this zone are reported as part of the nearshore rockfish group. They include rockfish species commonly found off Oregon such as black-and-yellow, brown, china, copper, gopher, grass, olive and quillback.
- Shelf rockfish complex – Includes species predominantly occurring over the continental shelf area along the Oregon coast. Three species of this group, **canary**, **widow**, and **yellowtail** are reported separately. Other species reported in the shelf group include primarily bocaccio, chilipepper, cowcod, greenspotted, greenstriped, pygmy, redstripe, rosethorn, rosy, silvergray, speckled, stripetail, tiger, vermilion, and yelloweye.
- Slope rockfish complex – Includes species predominantly occurring over the continental slope area along the Oregon coast. Two species, the **Pacific Ocean Perch** and **shortbelly** rockfish are reported in the tables separately. Other species reported in the slope complex include aurora, bank, blackgill, roughey, shortraker, redbanded, sharpchin, splitnose, and yellowmouth rockfish.

The rockfish species included in the discontinued group of nominal POP are now predominately reported as slope rockfish. The rockfish species included in the other rockfish group are predominately reported in the nearshore and shelf rockfish complexes.

The pounds of rockfish listed by species in the tables are as reported on fish tickets by the dealers but the data does not reflect the actual species pounds caught. Each species group and complex has contamination of other rockfish species at the point of landing. Oregon Department of Fish and Wildlife biologists routinely sample each of the species and complex categories of rockfish at the dock to determine species composition for each. This market sample data is applied to the fish ticket data to obtain more accurate estimates of annual landings of rockfish by species. This information is not included in this report, but an annual summary table is available and can be obtained by contacting ODFW.

The trends portrayed in Table 3A (Annual Landings, 1991-2000) are the result of many factors such as regulations, abundance of fish, market demand and

technical advances. Most fisheries reflect the effect of all these factors and caution should be used in interpreting or projecting trends.

The oyster data presented in Table 64 is included as a matter of interest only. There is no Department-managed commercial oyster fishery in Oregon. The data in the table reports oyster plat production by private enterprises using estuarine acreage leased from the State of Oregon.

Value of Catch

Beginning in 1992, dealers were required to report price per pound on all species purchased and compute landing fees based on the value of the catch. The reported value is derived from fish tickets and is based on the ex-vessel price per pound paid to the fisherman.
