All Areas	165,944	309,537	68,893	28,956	11,876	777	585,983

* Area V and Cove combined due to lack of sampling data.

@ The April and September catch for 1955, 56 and 57 was extrapolated by comparing the percentage these months made up of the total personal-use harvest in 1958 and 1960. In 1959, April was abnormal due to weather and tides and therefore omitted for extrapolation purposes. Age composition for April in 1955, 56 and 57 was taken from the May data and the August data was used for September.
