1992 BAY CLAM DATA SERIES REPORT

INTRODUCTION

This report summarizes the results of our bay clam studies in 1992. Activities summarized include commercial clam fishery monitoring only. This report is presented as a series of tables with a minimum of discussion; other reports will evaluate the data presented here. The tables included give a historical overview of clam harvesting activities and are presented in a manner to allow future analysis to show trends of changes in stock status and fishing activities. This report is intended primarily to be an internal document, to be used as a reference by the shellfish staff.

Recreational clam digger interviews for 1992 were eliminated totally due to budgetary restraints for the first time since 1976. Lack of adequate funding and personnel forced the elimination of this valuable information source. We plan to attempt to reinstate part of this program with volunteer help in 1993.

COMMERCIAL CLAM HARVEST

We issued 115 permits to commercial fishermen to harvest bay clams in 1992 (Table 1). Twenty-nine fishermen reported landings of 62,044 lbs of clams. In 1991, 40 fishermen reported landings of 87,842 lbs. Cockle clams represented the bulk of the commercial catch in 1992 at 35,800 lbs (57.7%) (Table 2). Tillamook Bay was the major producer of bay clams in Oregon with 35,935 lbs (57.9%). The Yaquina, Umpqua and Coos estuaries followed in order producing 7,067, 6,095, and 5,986 lbs of clams in 1991 respectively (Table 3).

Increased harvest effort for native littlenecks and gapers resulted in a significant Yaquina Bay harvest level. Yaquina Bay yielded 7,067 lbs of clams in 1992 as compared to 1,013 lbs in 1991.

Table 1. Oregon commercial clam harvest in pounds, 1970-92.

Year	Harvest (lb)	# Diggers	# Landings	Ave. lb/ landing	# Permits Issued
1970	25,884	40	258	100.3	0
