

FISH COMMISSION OF OREGON
TRAWL INVESTIGATION

Report of Cruise 67-2, Shrimp Survey, Phase B-Fish

Vessel: MV Sunrise, chartered trawler.

Date: February 20-May 4, 1967

Objectives: Phase A. To determine distribution and abundance of pink shrimp (Pandalus jordani) off Oregon and determine size, sex ratio, and age composition of shrimp caught.

Phase B. 1. To collect data on sex and size composition of Dover sole.

2. To identify, count, and weigh incidentally caught fish.

3. To collect incidentally caught fishes and invertebrates as requested.

4. To collect oceanographic data (salinities, temperatures, and bottom-type samples).

Methods: The 60-foot vessel towed a 41-foot headrope Gulf semi-balloon trawl. The trawl was made of 1-1/8-inch stretch mesh netting in the body and intermediate, with 1-1/2-inch mesh in the cod end. The anterior one-third of the cod end contained a 1-1/8 half-inch innerliner, while the posterior two-thirds of the cod end had a 1/2-inch knotless innerliner. Plastic rollers and 1/4-inch galvanized chains, hung loop style, were attached to the 52-foot footrope. A 49-foot, 5/16-inch steel tickler chain completed the net which was attached to the otter boards by a 30-foot bridle.

The catch from each tow was sorted to species and fish were weighed and, if time permitted, counted. Dover sole were sexed and measured to the nearest lower cm except that those less than 16 cm in length were preserved. Unique and requested fish and invertebrate species were preserved as time permitted. A number of bottom-type samples, salinities, and temperatures were collected.

Results: The survey of the Oregon coastal waters was divided into five areas: (1) Oregon-California border to Cape Blanco; (2) Cape Blanco to Umpqua River; (3) Umpqua River to lower Heceta Bank (44° 02' N Latitude); (4) Stonewall Bank (44° 20' N. Latitude) to Cape Kiwanda; and (5) Cape Kiwanda to Columbia River. A total of 173 tows were made. In area 1, 26 tows were made in 46 to 138 fathoms. Area 2 had 35 tows made in 50 to 132 fathoms. In area 3, 19 tows were made in 54 to 126 fathoms. Area 4 had 38 tows made in 50 to 125 fathoms. In area 5, 55 tows were made in 49 to 123 fathoms. No tows were made on Heceta Bank because of rough bottom.

Each tow is summarized in Table 1 as to tow data and pounds of catch. Weights are listed for petrale, English, and Dover sole and Pacific ocean perch. Other species were grouped into rockfish, flatfish, round fish, and miscellaneous fish. Table 2 lists the species caught in each group. Figure 1 shows tow locations by area.

Area 1. Rex and slender sole were the most commonly caught species and occurred at depths of 40-100 fathoms. Next in prominence were Dover sole and stripetail rockfish. Dover sole was commonly caught at 80-100 fathoms while stripetail rockfish occurred at depths of 60-80 fathoms and greater than 100 fathoms.

Area 2. The most commonly caught species was rex sole which occurred in depths of 50 to greater than 100 fathoms. Other prominent species were tomcod caught in 50 to 60 fathoms, slender sole caught in 60 to 100 fathoms, smelt caught in 60 to 80 fathoms, and sablefish caught in 80 to 100 fathoms. At depths greater than 100 fathoms, blackmouth rockfish was commonly caught.

Area 3. The most commonly caught species was slender sole, which was taken in depths of 60 to greater than 100 fathoms. Next in prominence was rex sole caught between 50 and 80 fathoms, and Dover sole at depths of 80 to 100 fathoms. Rockfish species were commonly caught at depths greater than 100 fathoms.

Area 4. Slender sole was the most commonly caught species, being found in depths of 60 to greater than 100 fathoms. Other commonly caught species were tomcod and sand dabs found in 50 to 60 fathoms, smelt and rex sole in 60 to 80 fathoms, and Dover sole caught at depths greater than 100 fathoms.

Area 5. Of the species caught, smelt and rex sole were the most common and were found in 60 to 100 fathoms. Sand dabs and tomcod were caught in 50 to 60 fathoms. Sablefish, Dover sole, and Pacific ocean perch were prominent in depths of 80 to greater than 100 fathoms.

Personnel:

- Jack Robinson, Party Chief, 2/20-3/19, 3/29-5/2/67
- Robert Demory, Party Chief, 3/20-3/28, 5/3-4/67
- Rudy Lovvold, Vessel Captain
- Gary Milburn, Biologist, 2/20-5/4/67
- Roland Montagne, Biologist, 2/25-26/67
- Terry Link, Biologist, 2/20-23/67
- Robert Thompson, Trainee, 4/2-11/67
- Tom Lovvold, Crewman

1/ Pet. = petrale sole; Eng. = English sole; Dov. = Dover sole; P.O.P. = Pacific ocean perch.

2/ See Table 2 for species composition.

3/ T = Trace, barely an observable amount, not enough to weigh, usually less than a pound.

Table 1. Tow data and pounds of catch listed by station, cruise 67-2, phase B (continued).

No.	Depth (fms)	Time (min.)	Tow data		Catch in pounds							
			Loran		Pet. ^{1/}	Eng. ^{1/}	Dov. ^{1/}	P.O.P. ^{1/}	Rock-fish ^{2/}	Flat-fish ^{2/}	Round-fish ^{2/}	Misc.-fish ^{2/}

^{1/} Pet. = petrale sole; Eng. = English sole; Dov. = Dover sole; P.O.P. = Pacific ocean perch.^{2/} See Table 2 for species composition.^{3/} T = Trace, barely an observable amount, not enough to weigh, usually less than a pound.

Table 2. Common and scientific names of fishes
caught during the spring 1967 shrimp cruise.

Petrale sole	<u>Eopsetta jordani</u>
English sole	<u>Parophrys vetulus</u>
Dover sole	<u>Microstomus pacificus</u>
Pacific ocean perch	<u>Sebastodes alutus</u>

Rockfishes:

Rougheye rockfish	<u>Sebastodes aleutianus</u>
Blackmouth rockfish	<u>S. crameri</u>
Splitnose rockfish	<u>S. diploproa</u>
Greenstriped rockfish	<u>S. elongatus</u>
Widowrockfish	<u>S. entomelas</u>
Yellowtail rockfish	<u>S. flavidus</u>
Rosethorn rockfish	<u>S. helvomaculatus</u>
Shortbelly rockfish	<u>S. jordani</u>
Boccaccio	<u>S. paucispinis</u>
Canary rockfish	<u>S. pinniger</u>
Redstripe rockfish	<u>S. proriger</u>
Yellowmouth rockfish	<u>S. reedi</u>
Rasphead rockfish	<u>S. ruberrimus</u>
Flag rockfish	<u>S. rubrivinct</u>
Stripetail rockfish	<u>S. saxicola</u>
Pygmy rockfish	<u>S. willsonii</u>
Sharpchin	<u>S. zacentrus</u>

Flatfishes:

Pacific sanddab	<u>Citharichthys sordidus</u>
Arrowtooth flounder	<u>Atheresthes stomias</u>

Table 2. Common and scientific names of fishes caught
during the spring 1967 shrimp cruise. (continued)

10.

Rex sole	<u>Glyptocephalus zachirus</u>
Flathead sole	<u>Hippoglossoides elassodon</u>
Slender sole	<u>Lyopsetta exilis</u>

Roundfishes:

Pacific herring	<u>Clupea harengus pallasi</u>
Northern anchovy	<u>Engraulis mordax</u>
Smelts	Osmeridae
Pacific cod	<u>Gadus macrocephalus</u>
Pacific hake	<u>Merluccius productus</u>
Pacific tomcod	<u>Microgadus proximus</u>
Walleye pollack	<u>Theragra chalcogrammus</u>
Sablefish	<u>Anoplopoma fimbria</u>
Lingcod	<u>Ophiodon elongatus</u>
Red Irish lord	<u>Hemilepidotus spinesus</u>

Miscellaneous fishes:

Pacific hagfish	<u>Polistotrema stouti</u>
Lampreys	Petromyzontidae
Spiny dogfish	<u>Squalus acanthias</u>
Big skate	<u>Raja binoculata</u>
Longnose skate	<u>R. rhina</u>
Starry skate	<u>R. stellulata</u>
Ratfish	<u>Hydolagus colliei</u>
Hatchetfishes	Sternoptychidae
Lanternfish	Myctophidae
Shiner perch	<u>Cymatogaster aggregata</u>
Threadfin sculpin	<u>Icelinus filamentosus</u>

Table 2. Common and scientific names of fishes caught
during the spring 1967 shrimp cruise. (continued)

Sea poacher	Agonidae
Snailfish	Cyclopteridae
Ronquils	Bathymasteridae
Eel pouts	Zoarchidae
