Portland, OR 97207

April 1998

FOREWORD

The statistics presented in this publication provide information on the amount and value of commercial food fish landings in the State of Oregon in 1995. This information is frequently requested by various government, industry or private user groups for resource management, marketing, land use planning or other needs. We have not attempted to explain management objectives, harvest methods or trends in the commercial fisheries.

The joint efforts of many persons were required to assemble this material - the commercial fishing industry, wholesale fish and bait dealers and Oregon Department of Fish and Wildlife personnel. Data processing specialists prepared landing records for data entry and monitored the timeliness and accuracy of the records. Data entry personnel spent many hours entering the record information on the computer data base and Department management biologists reviewed the accuracy of the reported information.

The authors would like to acknowledge the efforts of three individuals in particular who played key roles in the processing and quality of the data in this report and in past years Pounds and Value reports. The three are:

- **Dave Judkins**, who developed most of the programs used in landings data processing and reporting. Dave's quick and highly competent programming talents have helped immeasurably in keeping the data processing and report generation of a very complex system running smoothly.
- **Romy Grover**, the lead person responsible for processing fish tickets before and after data entry, in addition to handling all the peripheral activities associated with the fish ticket system. Romy is a very competent and conscientious data specialist who excels at moving the ticket records through the process, maintaining attentiveness to detail, follow-up, and resolution, so necessary for a timely, accurate data base.
- **Kathy Murphy**, a data technician in the Marine Program at Newport, who among her many duties, is also responsible for processing the complex Groundfish fish tickets in concert with the commercial fish data base in Portland. Kathy is very dedicated, detailed, and careful in her job and provides an invaluable service helping to maintain the accuracy of the groundfish portion of the commercial fish data base.

Their knowledge, expertise and highly conscientious efforts through the years have played a large part in insuring that the Oregon commercial fisheries data base is one of the most accurate and timely data bases on the Pacific coast. The efforts of all three are greatly appreciated.

EXPLANATION OF TABLES

Source of Data

Oregon law requires commercial fishermen to sell their catch to a licensed wholesale fish or bait dealer. At time of sale, the dealer must record certain information on a Fish Receiving Ticket forms supplied by the Department. This information includes date of landing, unloading port, gear used to take the fish or shellfish, pounds landed by species and price per pound paid to the fisherman. The fish tickets are returned to the Department where they are edited for accuracy and completeness prior to processing for tabulation.

Landings

Commercial landings are reported for the Columbia River (Oregon landings only), ports along the coast (Fig. 1), and by county for freshwater species (Table 64). Landings at the coastal ports include ocean and bay/estuary-caught fish or shellfish. For ocean-caught species, port of landing does not necessarily indicate general area of catch. Boats can fish coast wide and return to their home port (or any other port) to land their catch.

Landings by month reflect the date of purchase by the dealers. This may not necessarily be the date the fish were caught, as many vessels have the capability of holding fish for extended periods of time before returning to port.

All fish and shellfish landings, unless otherwise indicated, are reported as round (whole) weight. Certain species may be dressed or filleted prior to landing and the following percentages were used to convert these landings to pounds round weight:

| | | |
|--------------------------------|---|--------|
| Halibut, dressed, head-on | + | 15% |
| " dressed, head-off | + | 35% |
| Salmon, troll dressed, head-on | + | 15% |
| Sablefish, dressed, head-off | + | 60% |
| Scallop, shucked | + | 1,220% |
| Pacific Whiting, filleted | + | 235% |
| " headed and gutted | + | 156% |
| " surimi | + | 625% |

The common and scientific names of species reported in the commercial catch are shown in Table 1. Fish dealers are required to record each species landed; however, this is not always possible due to the difficulty identifying certain species. Some species are combined and reported under a market category, i.e. "Rockfish, other sp." includes several different species of rockfish that are combined and reported only as "rockfish" by the dealers. The rockfish in particular are a group that are difficult to differentiate because of structural similarities among several species.

Pacific ocean perch (P.O.P.) includes several species that are perch-like in appearance. P.O.P. is a market category and is reported separately by fish dealers, but in two different ways. In some areas, landings of Pacific ocean perch are comprised of a very high percentage of true P.O.P. and are subsequently reported on the ticket as P.O.P. In other areas, perch look-alikes are predominant and landings are reported as nominal P.O.P. on the ticket. This category includes a smaller percentage of true P.O.P.

Figure 1. Oregon coastal ports

Landings of shortspine and longspine thomyheads are combined and reported by their scientific genus name *Sebastolobus*. Prior to 1984 they were included with other rockfish.

The Pacific Fisheries Management Council requires separate reporting of quota-managed species such as the yellowtail and widow rockfish and P.O.P. Even though these rockfish species pounds are reported separately by the dealers on fish tickets, there is still contamination of other rockfish species at the point of landing. The rockfish species poundages printed in the tables in this report reflect this contamination. Oregon Department of Fish and Wildlife biologists routinely sample the market categories of rockfish at the dock to determine species composition for each category. This market sample data is applied to the fish ticket data to obtain more accurate estimates of annual landings of rockfish by species. This information is not included in this report, but an annual summary table is available and can be obtained by contacting ODFW.

The trends portrayed in Table 3 (Annual Landings, 1986-95) are the result of many factors such as regulations, abundance of fish, market demand and technical advances. Most fisheries reflect the effect of all these factors and caution should be used in interpreting or projecting trends.

The oyster data presented in Table 62 is included as a matter of interest only. There is no commercial oyster fishery in Oregon. The data in the table reports Oregon oyster production by private enterprises established in several Oregon estuaries.

Value of Catch

Beginning in 1992, dealers were required to report price per pound on all species purchased and compute landing fees based on the value of the catch. The reported value is derived from fish tickets and represents the ex-vessel price per pound paid to the fisherman.

Table 1. Common and scientific names of species reported in the Oregon commercial catch.

| Common Name | Scientific Name | Common Name | Scientific Name | Common Name | Scientific Name |
|-------------------------------|--|------------------------------|--|---------------------------------|---|
| FISHES: | | | | | |

APPENDIX

1995 Personal Income Contribution of the Commercial Fishing and Processing Industry to Communities on the Oregon Coast and to Oregon's Economy

An economic input/output (I/O) model can be used to estimate the total economic impact or contribution of an industry. Separate I/O models for each coastal area and for the State of Oregon were used to estimate the total (direct, indirect and induced) personal income derived from the commercial fishing industry in Oregon.

A total of \$204 million in personal income was generated in all Oregon coastal communities as a result of commercial fishing and processing activities, including income returned to Oregon by residents who fish in distant water fisheries. Because a portion of the dollars generated "leak out" of the coastal economy, the estimated statewide total personal income received by Oregon residents amounted to about \$254 million.

Although the commercial fishing industry provides somewhat less than one percent of total Oregon earned income, it is extremely important to the coastal economy, providing about 11 percent of coastal earned income in 1995. Table 1 is a summary of the personal income contribution of the industry to coastal areas and the state.

The trend in the personal income impact of the commercial fishing and processing industry is shown in Table 2. The table summarizes the impact of fish and shellfish landed and processed in Oregon at the state level and for coastal areas from 1986 through 1995 expressed in 1995 dollars.

**Table 1. Personal Income Contribution of the Oregon Commercial Fishing and Processing Industry
to Oregon Coastal Communities and to Oregon, 1995. (Millions of Dollars) 1/ 2/**

| | Astoria and Columbia R. Area | Tillamook Area | Newport Area | Coos Bay Area | Brookings Area | All Coastal Communities | Total State Level Impact |
|---|------------------------------------|-------------------|-----------------|------------------|-------------------|-------------------------------|--------------------------------|
| Oregon Landings | \$47.9 | \$3.3 | \$45.5 | \$26.9 | \$11.1 | \$134.7 | \$173.9 |
| Distant Water | \$13.8 | \$1.9 | \$47.9 | \$4.8 | \$0.9 | \$69.3 | \$80.2 |
| Total | \$61.7 | \$5.2 | \$93.4 | \$31.7 | \$12.0 | \$204.0 | \$254.1 |
| Percent of Total Personal Income 3/ | 9.0% | 1.3% | 11.5% | 2.8% | 3.0% | 6.0% | 0.37% |
| Percent of Total Earned Income 4/ | 14.9% | 2.6% | 22.4% | 5.2% | 7.5% | 11.3% | 0.58% |
| 1/ Estimates by Hans Radtke (Consulting Economist) and Chris Carter (Staff Economist) with some data provided by the Oregon State University Sea Grant Extension Agents. The personal income impact estimates are calculated with the Commercial Fisheries Economic Assessment Model developed by William Jensen and Hans Radtke. Total personal income includes direct, indirect and induced effects. | | | | | | | |
| 2/ In most cases the economic impact for areas listed includes impacts for smaller ports in the area. The Tillamook area includes Pacific City. The Newport area includes Depoe Bay. The Coos Bay area includes Florence, Reedsport and Bandon. The Brookings area includes Port Orford and Gold Beach. | | | | | | | |
| 3/ Computed as total income generated directly and indirectly by the commercial fishing and processing industry divided by total income from all sources. Total income from all sources is based on personal income estimates from the U.S. Department of Commerce, Bureau of Economic Analysis. Personal income is the sum of wages and salaries, other labor income, proprietors' income, personal dividend income, personal interest income and transfer payments less personal contributions for social security. Estimates for Coos Bay area are slightly overstated due to inclusion of Reedsport/Winchester Bay and Florence impacts in comparison to Coos County personal income. | | | | | | | |
| 4/ Computed as total income generated directly and indirectly by the commercial fishing and processing industry divided by total earned income as represented by estimated net earnings by place of residence, which does not include personal contributions for social insurance. Earned income does not include transfer payments, dividends, interest or rent. | | | | | | | |

Table 2. Personal Income Contribution from Fish and Shellfish Landed and Processed in Oregon to Oregon Coastal Communities and to Oregon, 1986 - 1995.
 (Millions of Dollars adjusted to 1995 Basis) 1/ 2/ 3/

1/ Estimates by Hans Radtke (Consulting Economist) and Chris Carter (Staff Economist). Estimates include only the impact of fish landed in Oregon.

Distant water fisheries income is not included. The personal income impact estimates are calculated with the Commercial Fisheries Economic Assessment Model developed by William Jensen and Hans Radtke. Total personal income includes direct, indirect and induced effects.

2/ In most cases the economic impact for areas listed includes impacts for smaller ports in the area. The Tillamook area includes Pacific City.

The Newport area includes Depoe Bay. The Coos Bay area includes Florence, Reedsport and Bandon. The Brookings area includes Port Orford and Gold Beach.

^{3/} Adjustment to 1995 dollars made with the Implicit Price Deflator for Gross Domestic Product. (Economic Report of the President, US Government Printing Office.)
