INTRODUCTION

The data contained in this report is a compilation of actual field measurements and fish counts taken throughout a 40 year period from 1955 to 1995.

The information was collected as part of a major John Day River fish screening program designed to protect juvenile Salmon and Steelhead from perishing in irrigation diversion ditches throughout the John Day Basin. The program was started and funded in 1952 under the Columbia Program Office of the National Marine Fisheries Service. The actual construction, operation and maintenance of the fish screens was done under contract by the then Oregon State Game Commission (OSGC), later to become the Oregon Department of Fish and Wildlife.

These Data were actually collected on site by the screen maintenance technicians hired by OSGC to service and maintain the installed screens and bypass fish traps. At least one or more bypass traps were installed on each major stream with screens throughout the basin and all fish caught in the screen bypass traps throughout the irrigation season were counted to evaluate the effectiveness of the program. These technicians would check the traps and take stream temperatures from one to five times per week throughout the irrigation season which usually ran in the early years from mid March through mid November.

The central maintenance shop for the John Day fish screen program was constructed in 1952-53 near Canyon City, Oregon and operated in that location for over forty years (1953-1994) until a new facility was built west of John Day, Oregon in 1994.

PURPOSE

The primary purpose of this project was to preserve a long term set of important actual empirical field data for future use that would otherwise have been disposed of. Errol Claire, a long term employee and John Day District fish biologist for ODFW (1959-1996) had the foresight to keep track of these old field reports and prevented their disposal. Mr. Claire had actually worked with each of the screen maintenance technicians that collected these data which still remained on the old original data forms. He has been the primary facilitator in recovering, interpreting and preparing this data for computer storage and analysis.

Ken Delano, manager of the Grant Soil and Water Conservation District has played a major role in providing the computer base for storage and was responsible for writing and serving the contracts for funding.

Gretchen Wilson and Pat Holliday provided invaluable help with the computer key punching and data entry work. Colby Moulton, ODFW John Day Fish Screen Supervisor provided the most recent data from 1990-94.

Mike Crumrine, B.L.M. - Prineville District and Julie Luetzelschwab of the Malheur National Forest, with technical help from Errol Claire were responsible for creating the excellent GIS maps for this project.

JUSTIFICATION

In 1991, a John Day Basin water quality committee was formed to review water quality data needs, especially temperatures, in the basin. While current stream temperature monitoring was underway it was recognized that we needed any historic data that was available to provide a base or reference point against which to measure the success of various habitat projects being conducted in the basin. We believe these data are one of those historic sources.

This project is valuable and justified for the following reasons:

1. It was an actual empirical historic data source that if not protected would have been lost.
2. It is one of few long term consistent data sources of actual field measurements that has been preserved.
3. The analysis of these data will provide a 40 year baseline to measure against.
4. No other John Day data source possesses the diversity of streams or geographic locations these data do. Data was collected on 62 individual streams in the Basin at 176 different locations on those streams.
5. The compilation of this data was supported by all groups and agencies contacted including: Grant Soil & Water Conservation District, Oregon Department of Fish & Wildlife, Bureau of Reclamation, Oregon State University, Confederated Tribes of the Warm Springs Indian Reservation, and USFS - Malheur National Forest.

COOPERATORS

The following agencies or groups have indirectly or directly supported this project:

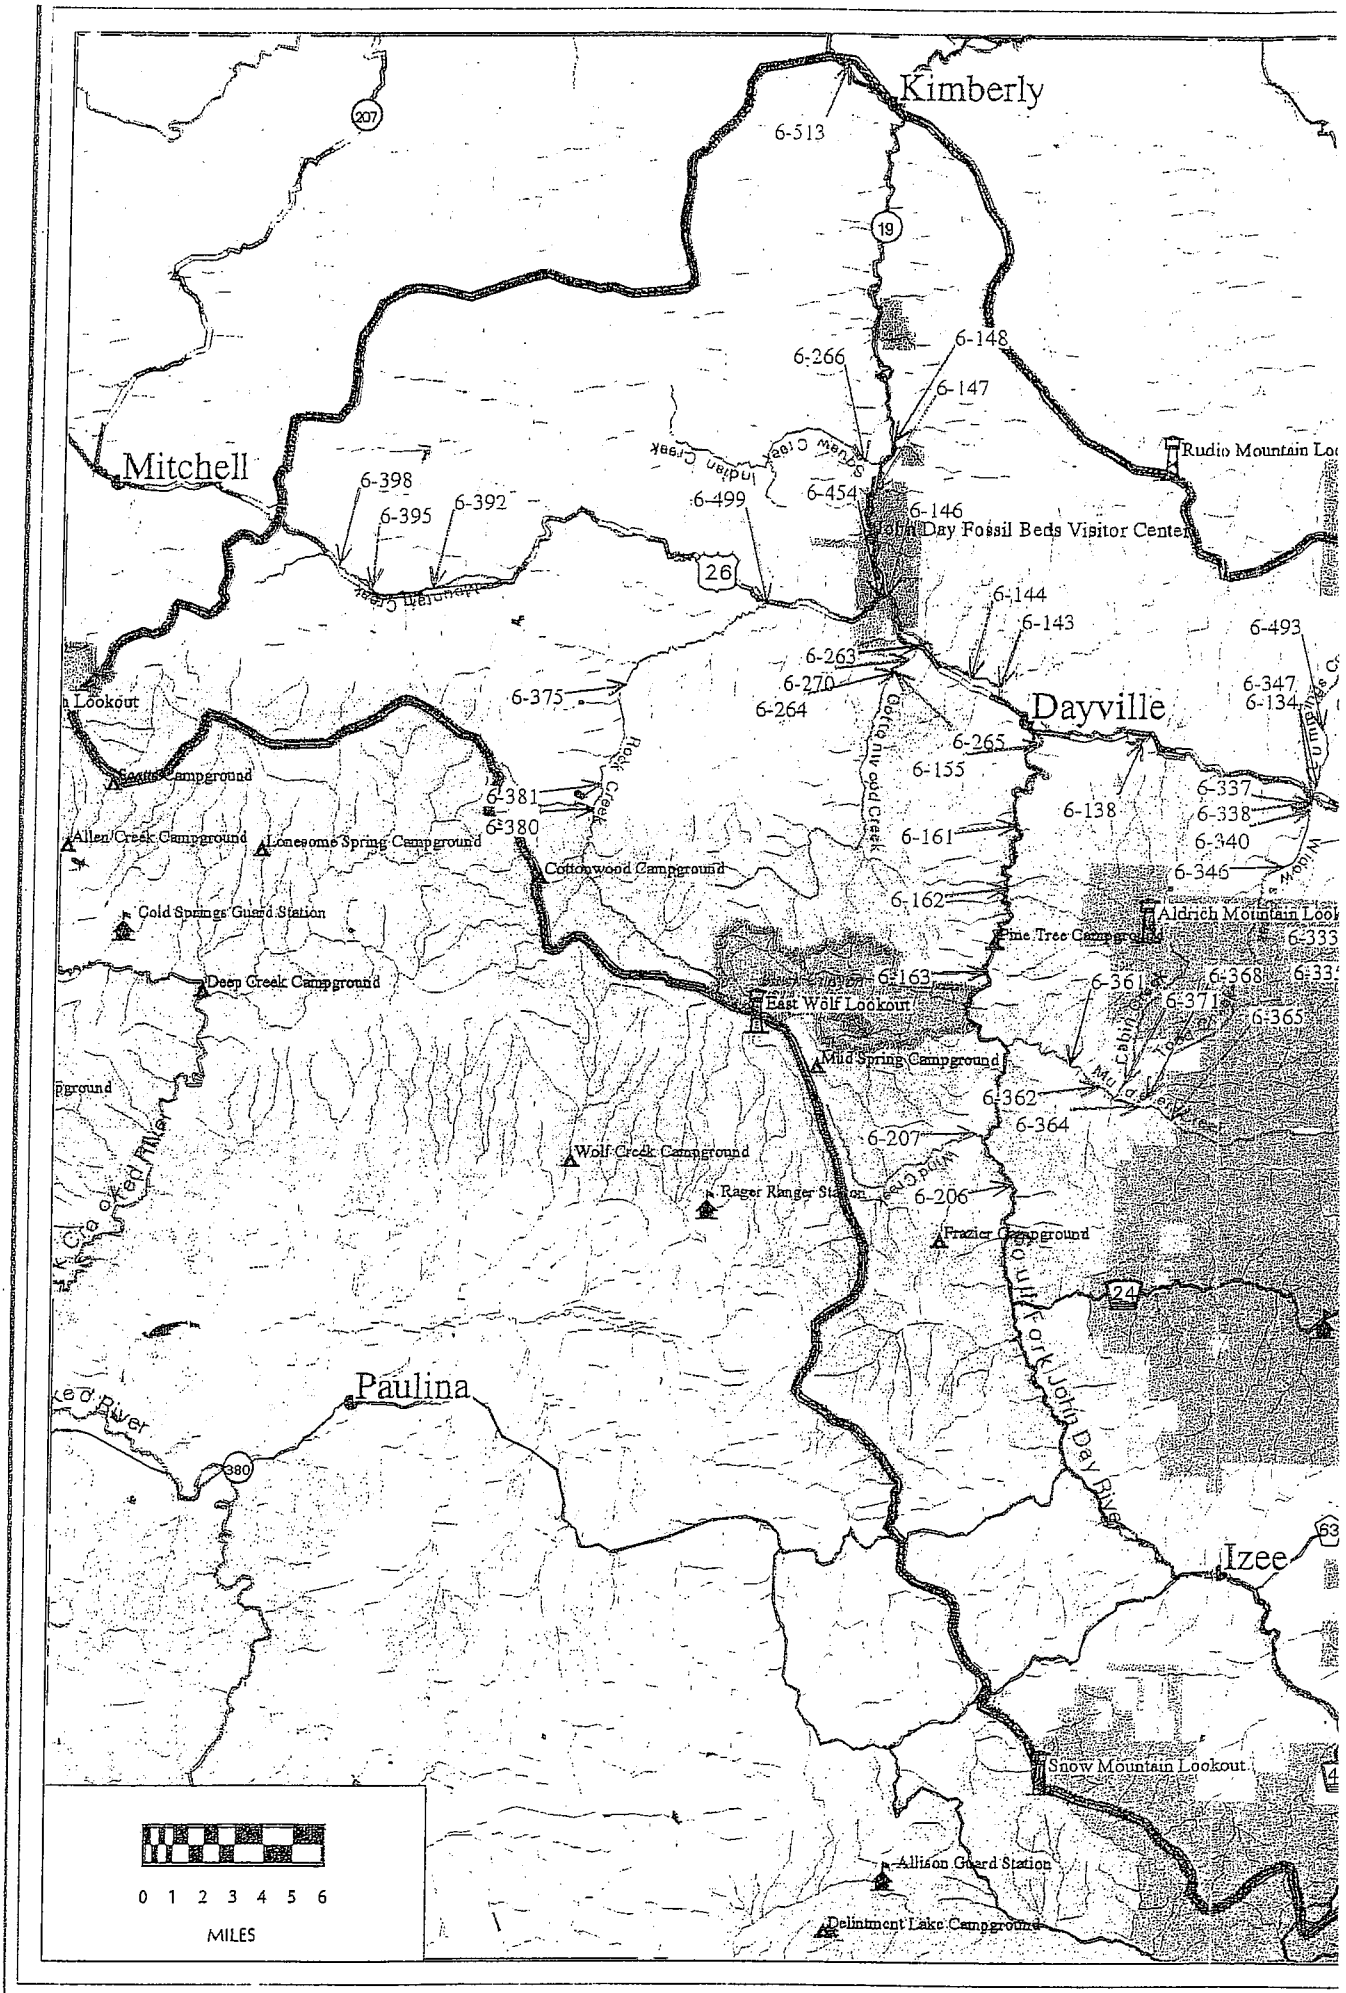

- A. Oregon Department of Fish and Wildlife -Northeast Region
(Access to data)
- B. Bureau of Reclamation - Boise, office
(Funding)
- C. The Grant Soil and Water Conservation District
(Administration, data processing and funding disbursement)
- D. Bonneville Power Administration
(Funding)
- E. Confederated Tribes of the Warm Springs Indian Reservation
(Contract for Funding)
- F. Bureau of Land Management
(Mapping)
- G. U.S. Forest Service - Malheur National Forest
(Mapping)

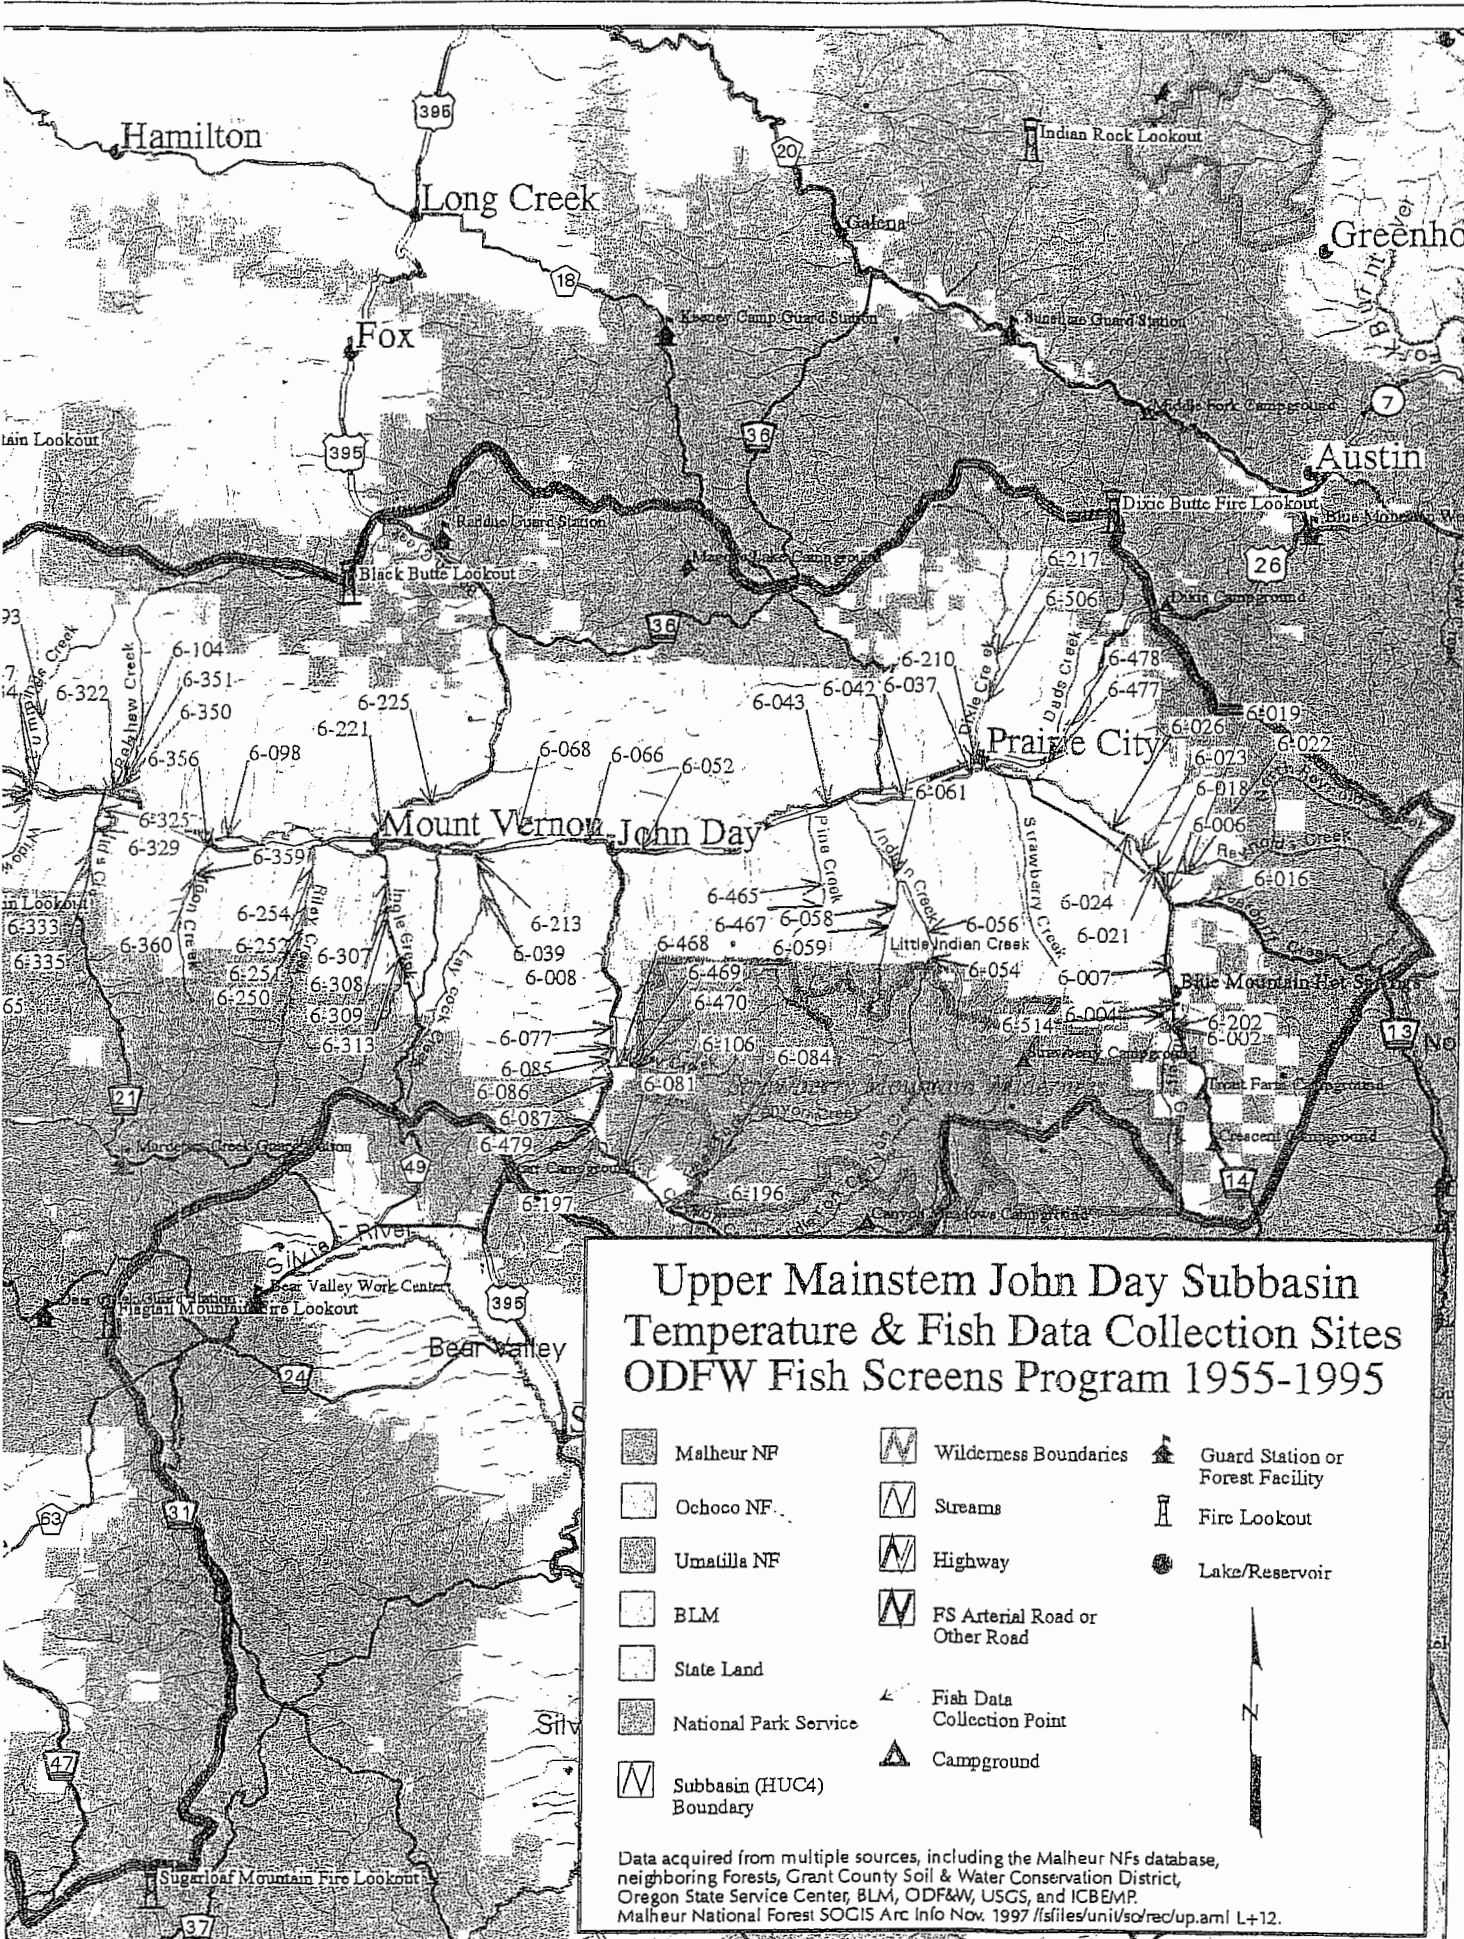

DISCLAIMER

The Grant Soil and Water conservation District makes no claims as to the accuracy or reliability of the historic data screened for preservation here. Raw data sheets used to prepare the data base are on file at the District office, 721 S. Canyon Blvd., John Day, OR 97845 (541-575-0135, FAX 541-575-0646). Daily screen monitoring sheets remain in possession of the Oregon Department of Fish and Wildlife at the Screen Shop in John Day, OR.

The highest expectation for the considerable effort expended in compiling and preserving this historic data is that the data will prove to be an invaluable link in understanding past conditions and planning for desired future conditions in the John Day Basin. Then, armed with the best available information, all land managers will be assisted in making the best natural resource management decisions.
