CENTRAL COAST ACCESS PLAN
Master Plan for Angler Access
and
Associated Recreational Uses

This report details a plan that we hope can be followed to solve the access problems of the Central Coast Access Plan. Too, we hope that all agencies that are interested in retaining existing water access as well as providing additional facilities, whether they be municipal, county, or state will all join in a cooperative effort to carry out this plan in an orderly manner. It is probable that Land and Water Conservation Funds will be available on a 50-50 matching basis. In order to acquire these funds, it will be necessary to apply through the Oregon State Highway Department.

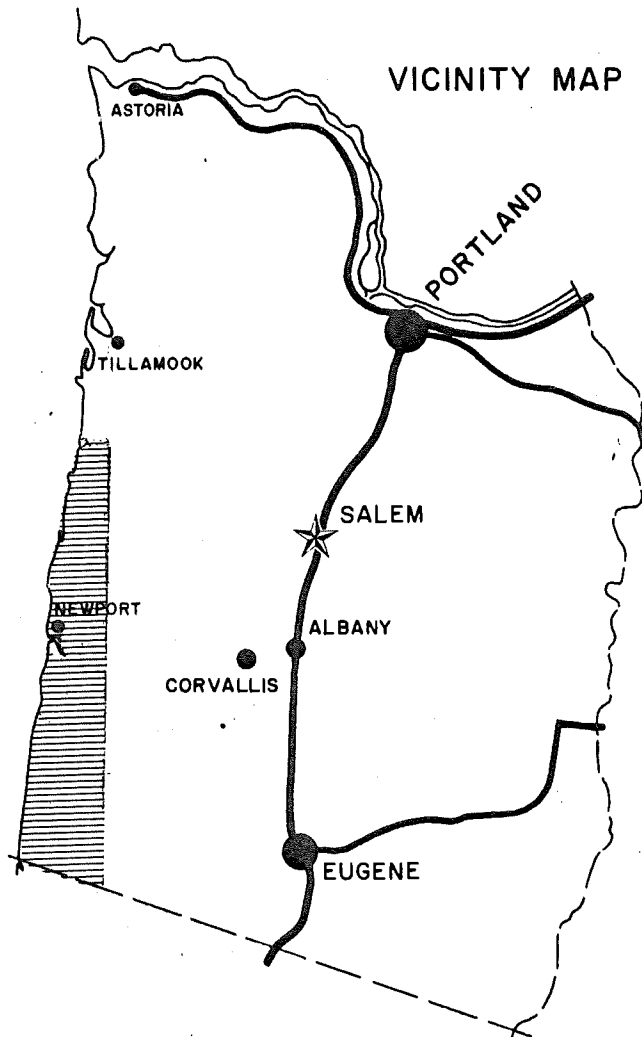

The Central Coast, hereafter referred to as the Mid-Coast, covers the ocean beach and estuary areas in Lane and Lincoln Counties. This 95-mile section of the Oregon Coast is quite accessible as U. S. Highway 101 parallels the shoreline rather closely the entire length. Major routes from the interior linking with U. S. 101 include: State Highway 18 from Portland; Highway 22 from Salem; Highway 20 and 34 from Corvallis; Highway 36 and 126 from the Eugene Area.

Recreational opportunities along the coast are both numerous and varied with some form of recreational available throughout most of the year. One of the greatest single attractions of the coastal area is the offshore salmon sport fishery from Depoe, Yaquina and Siuslaw Bays. In 1967 an estimated 142,675 anglers participated in the fishery from these three major ports. Perch and bottom fishes which are plentiful around the reefs and rocky areas of the coastline, along the jetties and in the bays also provide an excellent fishery. Excellent crabbing and clamming is also available in the bays.

Other recreation includes camping, picnicking, swimming and skin diving. Beach combing and sight-seeing are enjoyed by many people throughout the year.

Public access to the beaches along this section of the Oregon Coast is generally good. Numerous parks provide access to most of the beaches. However, there are a few areas where additional access or improvement of existing access is needed. Additional boat handling facilities or jetty improvements at some of the bay entrances will be needed to accommodate the rapidly increasing demand of anglers utilizing the offshore fishery.

The Mid-Coast has been divided into two areas containing 66 sites which have been evaluated. The areas are further described and a plan for public access is outlined in the following sections.

The Mid-Coast includes the ocean beach and estuary areas in Lane and Lincoln Counties.

The Mid-Coast is quite accessible as U. S. Highway 101 parallels the coastline throughout most of the area. The other main routes to the coastal area from the interior include: Highway 18 from Portland; Highway 20 and 34 from Corvallis; Highway 36 and 126 from the Eugene area.

AREA I

Included in this area are the ocean beaches and estuaries between the Salmon River Bay and the Alsea Bay. The coast line within this 50-mile section varies from large stretches of sandy beach to rocky bluffs with very little beach area. The major estuaries within this area are Salmon River Bay, Siletz Bay, Depoe Bay and Yaquina Bay.

Recreational opportunity on this portion of the coast is both varied and abundant. Angling, beach combing, bathing, sight-seeing and nature study are popular along the ocean beaches. In the bay areas, angling, boating, clamming and crabbing all provide family-type recreation.

While the beach and bay recreation has enjoyed a modest growth during recent years, the offshore salmon sport fishery has boomed at the bays where access to the ocean is available. With the advent of bigger and better sport boats and the improvement of jetty protection at some of the bay outlets, the growth of this fishery has been spectacular. For example, the sport effort at Depoe and Yaquina Bays has increased from 80,951 angler trips in 1963 to 128,415 angler trips in 1967.

If this growth trend continues as expected, additional boat-handling facilities or improved ocean access from other bays will be needed to accommodate this large influx of anglers.

Although most of the land between U. S. Highway 101 and the beach is privately owned, there is some public land interspersed throughout this section which provides access to most of the ocean beaches. In key areas where access is inadequate, additional development is recommended.

A total of 30 access sites has been evaluated for this area. Fourteen sites are considered adequate and 16 need additional development. The following evaluation sheets further describe each of these sites.

SALTWATER ACCESS SITE EVALUATION

Mid-Coast Region Site No. 1
I Area Priority B
Name Three Rocks (Salmon River)

Location West end of county road at mouth of Salmon River.

T. 6 S, R. 11 W, Sec. 14, 1/4 Sec. SW, County Tillamook

Ownership: Public

OTHER

Safety Problems:

Group Facilities:

REMARKS This area should be developed for parking, picnic facilities and beach access.

AREA II

This area covers the 45-mile section of Oregon Coast from Alsea Bay to the Lane and Douglas County line. The shoreline varies considerably from steep rocky bluffs along the northern part of the area to flat rolling sand dunes in the Florence area. The two major estuaries within the area are the Alsea and Siuslaw Bays.

The offshore sport fishery in this area isn't as spectacular as is indicated for the north half of the Mid-Coast, as the Siuslaw Bay provides the only ocean access. However, both the Alsea and Siuslaw have an excellent fishery for cutthroat trout and salmon within the bays. The lower reaches of some of the smaller streams in this area also provide good bank angling for salmon and steelhead.

As in Area I, other forms of recreation include camping, picnicking, swimming, beach combing and sight-seeing.

Public access is generally good as the numerous parks in this area provide access to most of the beaches along this section of the coast. Additional access or boat handling facilities has been recommended to assure the public of continued utilization of the recreation that is available at these sites.

Specific information on these access sites is provided on the following evaluation forms.
